

E-SWAN working group on sustainability

Working group members: Rico Behlke, David Berghmans, Denis Bousquet, Sophie Chabanski, Véronique Delouille, Thierry Dudok de Wit, Maxime Grandin, Anwesha Maharana, Aurélie Marchaudon, Rui Pinto, Luciano Rodriguez, Pauline Teyssyre

Objectives of this Working Group

- Examine the environmental impacts of our activities
- Increase community awareness of the finite natural resources of our planet
- Search for alternative, less damaging, ways of working
- Help us to make adequate choices to reduce our carbon footprint and environmental impact.
- Provide a place where members of E-SWAN can share their concerns, encourage each other and work together toward solutions.

Towards more sustainable activities

Reducing our carbon footprint is possible but challenging.

There is no simple solution, rather a series of actions that involve all aspects of our professional and personal activities:

- Make better use of archival data that are often under-used
- Make better use of existing missions : extend lifetime, use cruise phase
- Reduce travel by air, and encourage virtual/hybrid meetings
- Make the reduction of the carbon footprint of our instruments/facilities a funding priority
- Rethink our activities: less competition, more cooperation, increase R&D activities while reducing instrument development, etc.
- *Above all:* reduce the pace at which we build new facilities and launch new missions. Do less, but better.

As a community, we should recognise our responsibility and lead by example gain credibility.

This requires a deep and systemic change, involving us as individuals, our laboratories and companies, the way space weather and space climate are funded, our governments...

Sustainability Webinars Repository

All our webinars examining the environmental impact of our activities are recorded and available on the E-SWAN website

So far we have addressed :

- impact of meetings
- impact of AI
- space sustainability.
